

A: The .par files are binary files and there are many methods to open them. Since they are binary there is no way to open them without using a binary editor such as notepad++, fruity loops or WinRAR, however most people will use adobe audition CC and import them as an audio file. They are stored in a binary format because that is the format they are in but if you have a sound card and a computer with the required software there's not really any reason to not be able to open them. Here is the default command to open a par file. for i in \*.par; do audacity --convert-to s16be "Si"; done If you also want to play the audio in the file you can do the following. for i in \*.par; do audacity --convert-to s16be "Si"; for i in \*.wav; do avconv -i "Si" -acodec copy "Si"; done Here is the default command to save an audio file as a par file. for i in \*.wav; do avconv -i "Si" -acodec copy "Si"; done To open a .wav file with Audacity go to File > Import > Import Files > Open from Archive, and here is the default command. audacity --associate-input-devices=Default audio.wav This will open the audio file in a new track and open a box to where you can add more tracks for each part. When you are done with adding tracks right click the first one and select Duplicate then just rename the duplicate track and move it to the end of the list. If you want to use this command to convert to .mp3 do the following. for i in \*.wav; do avconv -i "Si" -acodec copy "Si"; done | convert - -quality 80 "Si".mp3 Thursday, June 22, 2012 I'll keep this very brief but here's a look at how we improved our board game. We brought it all the way to the final prototypes and still had some playtesting to do. We learned a lot of things. We tested different ways of dealing with the long deck tiles. We started with a smaller sort of board which was very useful for die rolling. We were also able to play this with only about 6 players (
