The film will have no dialogue and will require no plot to learn. The main characters are the masked vigilante protagonist and his trusted sidekick. The game follows the plot of the film. Summary: In a world of chaos, Jack Slade, a humble street cleaner, investigates possible criminal activity on the streets of San Diego. When a killer clad in a suit of business suits emerges, Jack Slade must take down the evil maniac, "The Judge" who's on a mission to wipe out all criminal elements. Being part of this community has opened my eyes and has taught me about making games! I want to thank you for the encouragement and awesome community of people around here. During this process of creating a full game engine, there will be crashes and bugs, but I will get the bugs out of the way. I am willing to listen to feedback and suggestions. Needed improvement: * Avoid using #import as it is not so easy to add or delete things during this process. So just adding in other files and not using the #import * Some of the character animations are buggy, most likely because of the heavy hand-drawn look and heavy animation. I'm glad that you like the concept art! I am planning to add more characters like the poster above. The concept art is just there to show how I envisioned the story and environment. I wanted to avoid using flash as it is a fickle medium. Also, I didn't want to use graphics from other games or even the movie for a couple reasons. The first reason is that this game is very much inspired by the characters and story from 'Enter the Dragon', so I don't want to put it out there that I ripped this off. The second reason is to stay true to the 80s original movie, and I feel that to make a game out of this, I need to stay true to the originals. Anyway, if you have any other suggestions or feedback, feel free to comment or email me at streetcleaner@gmail.com! Thanks for the comments and the feedback, everybody! "As a child, I lived for the day that I would get to fly my XB-46. I was so lucky and when I did, it was the most glorious day of my life. Yes, the B-47 was faster, but the XB-46 was so much more to me. The XB-46, it was such a beautiful thing. And now that I was flying it again, the feelings of nostalgia and excitement washed over me. I could see the countryside below me. It was near my home. No one would know. I would fly this beautiful bomber over the magnificent fields. And when I landed, I would cry." —Dr. Quentin Beck, Professor of Ancient Languages at the University of Durham. "Now as I head back to the B-47, I start to feel a little down. I miss the XB-46. It wasn't the speed, it was the thrill. It was the skill and the beauty. Not to mention, the privacy it gave you. There's only one other XB-46 flying around these days and I don't know where it is." —Dr. Quentin Beck, Professor of Ancient Languages at the University of Durham. The two-seat North American XB-46 never went into production. However, two prototypes were built by Consolidated Vultee (CV) and Boeing (Boeing), respectively. The first CV-443A (later re-designated the XB-46-1) flew for the first time in September of 1947. During this maiden flight the test pilot was Gordon Lee. The first flight of the Boeing XB-46-1 was performed at Boeing's home base in Seattle by Larry McDaniel on 2 January 1948. The XB-46-1 prototype served as a testbed and served as a point of reference for future production models. The CV-443B (later designated the XB-46-2), the second prototype, was flown in 1949 and 1950. Following the prototype, three North American Aviation-built B-47s (later designated the KB-47) and three Boeing-built B-47s (later designated the YB-47) entered service with the US Air Force. The last XB-46-2 and three B-47s were lost in accident between 1950 and 1955. Despite its size, the XB-46 was a popular trainer in post-war era. However, the lack of an

(game) Eleven Islands is a game by German games company East West Games based on C.S. Lewis' science fiction fantasy novels series A Child's Book of Angels. It was originally released in Germany as Nacht und Schatten, in the United Kingdom as Midnight and Shadow, and in North America as The Night, the Sea and the Shrouds. Eleven Islands is a typical puzzle game. Players control Thomas, a young boy who lives with his extended family. When his grandfather passes away and is to be buried, the family goes on a trip to visit the Icelandic island of Fjall to attend the funeral. During a storm, the family is separated, and eventually ends up in a harbor on a reef that is submerged under the sea. Now they have to get back home by themselves and can not just rescue each other but save themselves as well, as there are many dangerous creatures roaming the island. The game was highly praised and translated to many languages. It was 3 times nominated as "Game of the Year" and won several awards. With more than 2.3 million copies sold since its release, it has been considered as the best-selling children's game of all time. Gameplay Eleven Islands is a standard point and click game, similar to "Adventure" and "Zelda" games. It was released for several systems such as Apple II, Commodore 64, MS-DOS and Amstrad CPC; and the gameplay consist of a two-dimensional point and click adventure on a small screen accompanied by informative text. The gameplay is structured in five chapters, each consisting of several levels, with 18 possible ways to reach each of the levels. At the beginning, players are given a minor task to help them with their internal problems and for players to solve the puzzles. The titular main quest, the one pursuing to reach the whole story, is not the central one. Every chapter has at least two different end-goals: the player can help a brother and sister to get home, (for the first chapter), the players can rescue their mother from the sea (for the second chapter) or the players can save their grandfather (for the

third chapter). They have to share the same main quest, but usually the current problem is one of their own since they have to go through the chapters to find a way out of difficulties to the final battle in the end. In addition to the 23 problems and 10 sub-problems necessary to solve the

Quick Gameplay Single Player - Story Mode I made a single player campaign that takes place in between levels with the first level serving as the introduction. There are two endings to the story. It's meant to be played in one sitting. The story opens with a prequel so that you can get a feel for what's going on. Break's story is simple, but it's about as long as a Doomish single player campaign. It's meant to be short and easy to play. Of course, if you want to know more, there are lots of sites online that go over the story. Multiplayer I built support for local multiplayer for Break, but since it's really meant for single player, I didn't have a lot of time to put into it. I just have to say that it's in there, it works, but it's not finished yet. It is intended to be a secondary feature and should work on x86 Linux, Windows, and Mac. Networked Multiplayer Break is networked multiplayer-only. I built support for it, but it isn't finished. It's just in alpha. I expect to finish it and release a complete version of it within a year. Networked multiplayer is definitely one of the next things to work on. People can expect it to be complete before Break goes live. Contact Me I would really love to hear feedback on Break. I'm not expecting reviews because I'm not trying to go be a competitor to the other game we're competing with. I'm trying to compete with pure nostalgia. I want to go back to the days when people made their own games instead of buying them. I want to go back to the days when we all had our own custom made level editors, and it wasn't to make money. I want to go back to the days when you could do things without the need to resort to spyware, and having your full save settings erased. I want to go back to the days when I could have fun making my own content. I want to go back to the times when we didn't have game companies making simple clones and not caring about how much time and work went into our content. I made Break because I love classic FPS games, and I love old school game creation. I want to see all those dreams come true for all those people that had their own level editors back then. I want to create my own time machine so I can go back to the past, to see how it was back then and
