Our first game album, "The Life Of Greather" contains 10 tracks from the upcoming game, "The Life of Greather" by Dementia Studios. During the development of the game, Dementia Studios released several concepts and promotional trailers in order to gain exposure for the game. Because of the concepts and trailers, we've recorded and prepared a song and 12 variations for the game in order to help gain exposure. This soundtrack will be released to the public once the game has been released. Enjoy listening to this soundtrack and follow us on Facebook, YouTube, Twitter and Youtube to receive the latest updates on the game development and soundtrack releases. We hope you enjoy listening to the soundtrack as much as we enjoyed recording it, and if you like it, we hope you'll check out "The Life Of Greather" when the game is released. Thanks! Comments It's too bad there's no alternative for Greather Instrumental. You could easily place a C-style piano in there and it would fit the rest of the soundtrack. Also, I'm sure it wouldn't be hard to do a piano version of Greathers Quest with voice layers too. Greather Quest can be accessed in the game files, but in lower quality. Greathers Instrumental can also be accessed in lower quality via the game files, but this has been re-recorded in higher quality for the audio pack. Can't I just access these files in the game files? It would make the game files easy to find and copy. I have a confession to make: I bought this soundtrack to support Dementia Studios while they were (maybe, kinda) developing my first game. I have some slight regret, as I bought these tracks expecting to be able to listen to them anytime. Because the game is coming soon, I have no motivation to find them anywhere in the game now. If I get a notification later that Dementia has gone open-source, I'd be forced to buy and play this again. To clarify: I don't want any of the music added to the game. Just the sound effects. Some of the songs sound a bit strange, like the reworked instrumental of Greather Quest. Though this might just be because I haven't played the game yet. But still, the music just sounds unfinished, no matter how "good" the composition is. I wouldn't want to buy the game on that basis.

Objectives

Sage 3D is a 3D and a real time strategy game and includes some basic gameplay based on. NetLogo. The game is best played in a network environment.

There are 3 goals the player takes to accomplish when he starts the game.

- To move and keep moving to the next level
- Discover the world map where the dimensions lie and the different areas
- Use the abilities you have to ensure the success
- A tip for the hot-tempered players

The player can be positioned in the world map to pick up the different abilities.

Some abilities will be required to accomplish the game goals.

Mission

I have aimed for the complete mastering of a challenging puzzle game.

The 10 levels I have designed based on an anonymous painting of the 16th century.

The hand painted oil on canvas on that painting looks like an abandoned lighthouse on a rough sea at night!

The puzzle in the game is to move the Lighthouse several steps to get to a flowerpot which the knight will use to protect the lighthouse with a

In which we discuss old and new issues in how we play our game. Loot, Rare Objects and Magic Items: Hey! We got a ton of magic items this time around! Let's talk about them. So, not so much loot as a lot of unique magic items. We have explored some of these so I thought it might be worth adding them to the lore section. The objective here is to give out some interesting loot and try not to give away any important secrets. Most of these have been dropped by the bandit or the goblin. These items look like they are very expensive. I have been tempted to sell them for an amount equivalent to their current value just to avoid having the players make them feel like they can't afford them. That being said, if someone wants to get that much gold for them, they have my permission. I started to call some of the new monsters from Crypt Of The Everburning Heart. They are like Grumgors but with a completely different spellcasting approach. They are the primary source of the scrolls in the game and also one of the main sources of the crafted gear. I decided that I liked the way the cursed scrolls work and tried a different approach with my monsters. I liked it so much, I kept it and have been giving them away as rewards. They also exist to produce the two random weapons that I have tried to avoid. All of the bandits and goblins that appear are randomly selected from the lists. I want to make sure that the items that are given out as loot are always useful. I have started to make sure that their loot is much more likely to be helpful. I am glad that a lot of the rewards are better than the stuff that you find in-game. While my loot system is heavily inspired by real life, I have tried to keep it as close as possible to what would work in the game. If you are in the middle of a group and there is nothing that interests you, don't worry. There will be items that you want! Another thing that we will have is material rewards. This doesn't mean that it will be entirely flavor text. I have used this to my advantage to put the appropriate stuff in locations that are filled with loot. I just thought that the goblins and the bandits were very... filthy. Don't know if this is the kind of thing that you

A lot of them are too busy stringing udon noodles with tokusu-uke (spare-time pot grips) for the Antarctic expedition, or baking curries while dashing the odd iPhone, and asking women on message boards if they actually remember where they’ve parked their car, or sand out the batteries on their electronic toys, or why washing machines stand on their heads. As you might imagine, they could benefit greatly from a store with both novelties and familiar goods available on the shelf. Yet with the wide range of choices available the biggest problem that the average Japanese shop-owner faces when assembling their shelves is finding a good balance between utilitarian items and foolish nonsense. You can’t have everything, but they cannot make a good profit off a bleak store, unless they have a large number of visitors. And though it may be easy to go the “well, they like it anyway” route, that’s even more difficult to do with merchandise that is, to put it politely, quirky. Only fair to point out that it also makes them look unprofessional. “Foolish, not so much,” you say? Well you’ll be interested to know that for many of them it’s the other way around. And while they readily agree that some of the fads are silly, they do harbour a strong enthusiasm for the very odd things that are popular these days. The shop is call Mystery Mansion, which is fitting, because the merchandise on offer isn’t quite so mysterious as you think. This is one-stop-shop for Japanese shops to stock though, rather than something designed just for the purpose of selling trivial and occasionally useless (yet nonetheless Japanese) items.

You play as a BlobCat and are a new hero for DiceBuddy. You need to save the DiceMice, but they are trapped in a dangerous world! Your only mission is to help them escape the DiceMicehole. They've forgotten their home world, but they remember that you saved them before. Unfortunately, they don't have much confidence in your abilities. Will you be able to save them? PRINTS AND STICKERS FOR COLLECTORS BlobCat was originally designed in 96 DPI resolution and therefore has been compressed to support the Nintendo Switch. This means, that all the art has been scaled down and there are fewer colors. However, there are 100 unique colors in total and all of them have been redrawn, because they were too hard to read. This is pretty bad news, as this game has been designed with pixel art in mind, which means that every tiny detail is seen in every art piece. The colors and the shapes have been designed to bring the story of DiceBuddy to life and to add charm to your gameplay experience. On the other hand, if you enjoy the game and its pixel art, you can get the game in full resolution and a beautiful version of the game. This extra version of the game is over 300% larger compared to the normal release version. A lot of the art has been rescaled down to 1080 DPI, so the level design now looks much better. THE CONSOLE EDITION IS AVAILABLE FOR ONLY 1.99\$ IN THE WII U ESHOP! NOTICE: The TV versions of the game have been released, a few weeks ago. Unfortunately, the streaming of the TV versions is only possible on supported devices, such as the Nintendo Switch. Other platforms will be supported at a later point. If you don't have a Wii U or if you don't stream with the console, you can download the game from and be playing with the incredible TV versions almost immediately. A: The game is free on Steam and it will be free on iOS for you when it's released. If you want to play the game on another platform you have to get it from iOS or from PC. A: The game is available on Steam (and GOG and itunes) for \$9.99.
