What's new:

1.8 by engelbert In 2005 Portento released an Open Source version of Battlegroup Selcior. This year they released the first stable version of this program. This is a small toolbar that you can add to your favorites (to quick launch from your toolbar) or to your Desktop. You can use this tool as a password manager or as a way to store your passwords (with stored user names and access level). You can password encrypt your files (pdf's) to make them difficult to crack and screen shot your browsers and other programs. This program also encrypts the notes stored in your task bar. There is one tutorial included with this download on how to use this tool. System Requirements: This program is designed for: Windows 98/XP/2000/2003. If you want to remove the free demo (that is available from the download page) then follow the instructions to remove the icon from the desktop and from the tools menu. It's also worth mentioning that even though this is a freeware program (included with your download) there are other commercial alternatives. For example there is Decoy (from Signal Ministries. This is a free desktop package that also includes a password manager and a file encrypting utility. You are left with the question as to which utility to use. Personally I don't know of any others that have all the functions and features that this little program has. This program contains a file manager, a password manager, a note keeper, several utilities for security and a quick launch menu. I haven't used it for more than a year, but when I did it was so simple and fast that I can't imagine what kind of headaches I'd be having if I had the new version installed. When installing it's best to do so as a first time use (to avoid any headaches) and to do a backup first. Thanks again to Portento for developing this program and offering it to their vast online community. Notes: This release is only an update to v1.5 and only for Vista (and later). v1.7 is the latest in v1 series.
